Seeking a permanent software engineering role in France or abroad | Available from 16 October 2026

Professional Experience

BPCE

Apr 2026 – Oct 2026

AI Platform Engineering Intern

- Designed the sandbox isolating agent tools in an internal agent-runtime PoC: Docker confinement protecting host kernel and network, with the infra team; working on its Kubernetes architecture for scaling.
- Built an in-house planning tool based on constrained optimisation: drawing up the schedule used to take 1–2 days by hand; it now takes 1 h and the result is better optimised.

BNP Paribas

Sep 2025 – Mar 2026

Data Scientist Intern

- Cut Word-report processing from 3–5 to 1–3 min per document (about 95% analyst agreement), partly by parallelising LLM calls, in a React app co-built with a colleague; released to production after steering-committee approval; the lead analyst estimates it will save the team about 300 person-days a year.
- Ran the staging host and 75+ Docker containers behind the team's daily LLM tools (chat interface, inference gateway); reclaimed 600 GB of storage and kept the machine responsive.
- Deployed Langfuse on-premise for LLM observability (traces, cost, performance); walked the team through it.

French Red Cross

2025

Volunteer AI Contributor

- Co-built the AI layer of a first-aid training platform used by 50+ Red Cross volunteers: RAG over a 700-page manual and a Socratic coach; presented at ChangeNow and AI for Good (2025).

Projects

droit-de-retard

2026

- Personal follow-up to a team hackathon project: a local-first agent that drafts a delayed-flight compensation claim from the passenger's documents — the model extracts, an allow-list decides, Python computes.
- 121 deterministic offline tests; evaluation scope documented in the repo.

Pokémon × Gemma (private)

2026

- How far can a small local model get? Gemma 4 12B plays Pokémon Emerald through Ollama, with an explicit autonomy line, an append-only run log and ablations against a frontier model.

Diary

2025

- Audio-journal prototype: browser recording, FFmpeg conversion, FastAPI backend, cloud storage.
- Wired the upload and weekly-report workflow with an explicit analysis opt-in (React/TypeScript, Docker).

Hackathons

1st of 12 teams: IA & Crise, French Red Cross (2025) – see Experience

1st place: Science inFuZe (2025), education track – app promoting women in science

1st place: Google Datacenter Hardware (2024) – server-rack configuration

2nd place: LCL & Google Cloud (2024) – bank-card recommendation chatbot

3rd of 20 teams: Hackathon 54 (2024) – embedded prototype, concept taken forward

Technical Skills

Languages: Python, C, C++, Bash, SQL, TypeScript.

Platform: Linux, Docker, Kubernetes, Git, CI/CD, Langfuse.

Applied AI: PyTorch, RAG, function-calling agents, offline evals, vLLM, Ollama, FastAPI.

Education, Community & Languages

École 42 Paris, 2019–2026 — project-based computer science: C/C++, UNIX/POSIX, networking, concurrency.

GDG on Campus 42 Paris – Co-Lead Organizer since May 2026; Google talk on Gemini, 100+ attendees.

Fitness 42 – Coach for 3+ years: 15+ sessions led, 15–20 people each.

Spoken: French native; English fluent; Spanish B1.
