Seeking a permanent software engineering role in France or abroad | Available from 16 October 2026

Professional Experience

BPCE

Apr 2026 – Oct 2026

AI Platform Engineering Intern

- Designed a Docker sandbox for an agent-runtime PoC with future production security requirements in mind: non-root execution and allow-listed network access; contributing to Kubernetes deployment design with the infrastructure team.
- Cut the time needed to schedule training for 1,500–3,000 employees from 1–2 days to 1 hour with a constraint-based optimisation PoC covering 20 business rules.

BNP Paribas

Sep 2025 – Mar 2026

Data Scientist Intern

- Reduced processing time for Word reports on performance tests from 3–5 to 1–3 minutes, partly by analysing 10–15 screenshots in parallel with an LLM, in a React app built with a colleague.
- Released to production after steering-committee approval, with about 95% analyst agreement and a cost of about €0.30–0.40 per report; the lead analyst estimated annual savings of about 300 person-days for the team.
- Managed the staging host for the team's LLM tools, around 15 PoCs (75+ Docker containers); traced an interruption in Langfuse logging to a full disk and freed 600 GB of storage.
- Deployed Langfuse on-premises, adopted by 5 PoCs; wrote a team tutorial.

French Red Cross

2025

Volunteer AI Contributor

- At the hackathon, built the front end and features of a chatbot for first-aiders and co-built its RAG over a 700-page manual with a third-party platform's tools.
- Over six months, co-developed the app (front and back end): more realistic role-play scenarios with domain experts, a Socratic coach and flashcards; tested with about 50 first-aiders, shown at ChangeNOW and AI for Good.

Projects

droit-de-retard

2026

- Extended a team hackathon project into a local-first agent that drafts flight-delay compensation claims from passenger documents: the model extracts data, an allow-list restricts tool calls, and Python calculates compensation.
- 121 deterministic offline tests; evaluation scope documented in the repository.

Pokémon × Gemma (private)

2026

- Built a Pokémon Emerald agent with Gemma 4 12B: first gym battle won, all 89 recorded decisions made by the model.
- Found that Gemma was defaulting to the first numbered attack option. Removing the numbers made it select attacks by name: the best available move in 9 of 10 combat decisions.

Hackathons

1st of 12 teams: IA & Crise, French Red Cross (2025) – RAG chatbot for first-aiders

1st place: Science inFuZe (2025), education track – app promoting women in science

1st place: Google Datacenter Hardware (2024) – server-rack configuration

2nd place: LCL & Google Cloud (2024) – chatbot recommending bank cards

3rd of 20 teams: Hackathon 54 (2024) – embedded prototype, concept taken forward

Technical Skills

Languages: Python, C, C++, Bash, SQL, TypeScript.

Platform: Linux, Docker, Kubernetes, Git, CI/CD, Langfuse.

Applied AI: PyTorch, RAG, function-calling agents, offline evals, Ollama, FastAPI.

Education, Community & Languages

École 42 Paris, 2019–2026: C/C++, POSIX, concurrency; master's-level qualification (RNCP 7) expected Q1 2027.

GDG on Campus 42 Paris – Co-Lead Organizer since May 2026; 2 events of 100+ attendees (Google talk on Gemini).

Fitness 42 – Coach for 3+ years: led 15+ sessions with 15–20 participants each.

Languages: French native; English fluent; Spanish B1.
